**User Story Review**  
**User Story Title:** Employee Profile Employee Self  
**Description:** As a user, I want to employee profile employee self so that the related functionality works as expected.  
**Acceptance Criteria:** Given the system is operational, when the user performs the intended action, then the system should respond accurately and meet functional expectations.  
**Parameter Review**

| Parameter                | Description                                                                                                                        | Score (out of 20) |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Clarity                  | The story lacks specific details about the employee profile functionality, making it difficult to understand the intended outcome. | 12                |
| Completeness             | Preconditions and system actor details are not mentioned, making it challenging to derive test cases.                              | 10                |
| Business Value Alignment | The story does not explicitly mention any tangible healthcare value, such as patient safety or compliance.                         | 6                 |
| Testability              | It is challenging to derive test cases due to the lack of specific acceptance criteria and preconditions.                          | 8                 |
| Technical Feasibility    | The story does not provide enough information to assess its technical feasibility within typical healthcare system constraints.    | 4                 |

**Overall Score:** 40 / 100  
**Improvement Areas:**

Overall Score: 40 / 100

**Improvement Areas:**

1. **Add specific details about the employee profile functionality:** Provide a clear description of the intended outcome, including any relevant business rules or constraints.
2. **Specify preconditions and system actor details:** Clearly define the preconditions for the employee profile functionality and identify the system actors involved.
3. **Align with tangible healthcare value:** Ensure the story reflects tangible healthcare value, such as patient safety or compliance.
4. **Derive test cases:** Provide specific acceptance criteria and preconditions to enable QA engineers to easily derive test cases.
5. **Assess technical feasibility:** Provide enough information to assess the technical feasibility of the employee profile functionality within typical healthcare system constraints.

**Recommendations for Improvement:**

- Revise the story to include specific details about the employee profile functionality, preconditions, and system actor details.
- Align the story with tangible healthcare value, such as patient safety or compliance.
- Provide specific acceptance criteria and preconditions to enable QA engineers to easily derive test cases.
- Assess the technical feasibility of the employee profile functionality within typical healthcare system constraints.

**Action Items:**

- Revise the user story based on the recommendations above.
- Review and refine the revised user story with the cross-functional team (BA, QA, Developer).

## **User Story Review**

### **User Story Title**

#### **Employee Profile – Employee Self**

#### **Description**

**As a user, I want to access and manage my employee profile so that the related functionality works as expected.**

#### **Acceptance Criteria**

**Given** the system is operational,  
**When** the user performs the intended action,  
**Then** the system should respond accurately and meet the expected functional requirements.

---

**Parameter Review**

| Parameter                | Review                                                                                                | Score<br>(Out of 20) |
|--------------------------|-------------------------------------------------------------------------------------------------------|----------------------|
| Clarity                  | The story lacks specific details about the employee profile functionality.                            | 12                   |
| Completeness             | Preconditions, user roles, and system behavior are not clearly defined.                               | 10                   |
| Business Value Alignment | The story does not explicitly describe business value, healthcare impact, or compliance requirements. | 6                    |
| Testability              | The acceptance criteria are too generic, making it difficult to derive meaningful test cases.         | 8                    |
| Technical Feasibility    | The story lacks information about integrations, technical constraints, and system dependencies.       | 9                    |

**Overall Score**

45 / 100

---

**Improvement Areas**

- Add explicit acceptance criteria**
  - Define specific scenarios for employee profile viewing, creation, editing, and deletion (where applicable).
- Specify user roles**
  - Clearly identify actors such as employees, HR administrators, and managers, along with their permissions.
- Include business value and compliance**

- Explain how employee profiles contribute to operational efficiency, data security, regulatory compliance, and (if applicable) healthcare requirements.

#### **4. Improve testability**

- Add measurable acceptance criteria with expected outcomes to enable comprehensive functional and non-functional testing.

#### **5. Address technical feasibility**

- Describe integration requirements, data validation rules, storage considerations, scalability, and any external system dependencies.

---

### **Recommendations**

To improve the quality of this user story:

- Provide a clear and detailed description of the employee profile functionality.
- Define specific acceptance criteria covering profile viewing, creation, editing, validation, and error handling.
- Clearly identify all user roles and their responsibilities.
- Highlight the business value, including compliance, security, and regulatory considerations where applicable.
- Include technical details such as integration points, data validation, storage requirements, and scalability considerations.

---

### **Summary**

The current user story provides only a high-level objective and lacks sufficient detail for development and testing teams. By adding well-defined acceptance criteria, clarifying user roles, articulating business value, and including technical considerations, the story will become significantly more actionable, testable, and aligned with stakeholder expectations.
