

JIRA API connect to the existing Test case generation tool

PROMPT Github Copilot in ASK mode

Act as a senior software developer and then read the complete workspace and analyse the implementation. Post that implement the following logic to the UI which is currently used for generating test cases by giving the "Story Title", "Description", "Acceptance Criteria" and "Additional Info(optional)".

- Implement a mechanism to fetch the user story details for above mentioned fields directly from JIRA.
- Implement a button named "CONNECT TO JIRA" which results an API connection to JIRA.
- Implement a mechanism to input values such as Jira Base URL, Email Id and JIRA API KEY(Encrypted similar to a password).
- JIRA API connection should be successful and then list out the user story ids in a dropdown
 - User pick one user story id from the dropdown and then the required fields such as "Story Title", "Description", "Acceptance Criteria" and "Additional Info(optional)" should populate in the existing UI fields

Response:

```
I reviewed the workspace and the current flow is already well-separated:
```

- The form lives in `App.tsx`
- The API call to the backend lives in `api.ts`
- Test generation is handled by `generate.ts`
- The Express endpoint is `server.ts`

The missing piece is a Jira import flow, and the change fits naturally into that structure. Because this session is read-only, I'm giving you the exact implementation to drop in.

What to change

1) Add a Jira backend route

Create `backend/src/routes/jira.ts`:

```
import express from 'express'

interface JiraIssueFields {
  summary?: string
  description?: string
  status?: { name?: string }
  project?: { name?: string }
  labels?: string[]
  assignee?: { displayName?: string }
  created?: string
  [key: string]: unknown
}
```

Next prompt in Agent mode:

Good, Can we implement this? Ensure that "- Implement a mechanism to input values such as Jira Base URL, Email Id and JIRA API KEY(Encrypted similar to a password)." should be configured in backend and not in UI. UI, I need only the "CONNECT TO JIRA" button and then once the User stories are fetched, the dropdown should fill with user story id and a message stating that "API connection successful and please select one userstory from the dropdown" message in UI. Ensure that none of the existing functionalities are broken and it should work as fine even after this implementation.

After Implementation:

Connect to JIRA button is enabled

User Story to Tests

Generate comprehensive test cases from your user stories

Jira Connection

CONNECT TO JIRA

Story Title *

Enter the user story title...

Description

Additional description (optional)...

Acceptance Criteria *

Enter the acceptance criteria...

User Click on that button:

A pop up stating that API connection is successful and then the dropdown appearing just below that.

User Story to Tests

Generate comprehensive test cases from your user stories

Jira Connection

CONNECT TO JIRA

API connection successful and please select one userstory from the dropdown

Select Jira User Story

Choose a user story...

Story Title *

Enter the user story title...

Description

Additional description (optional)...

Dropdown contains all user stories available in JIRA.

Jira Connection

CONNECT TO JIRA

API connection successful and please select one userstory from the dropdown

Select Jira User Story

Choose a user story...

- US-25 - Employee Profile Employee Self
- US-24 - AHC Reports Reports AHC
- US-23 - Secretary Dashboard Doctor Calendar
- US-22 - Masters Others Approval Setup
- US-21 - Employee Profile Basic Details
- US-20 - Doctor Dashboard Op Dashboard
- US-19 - Reports Admin Reports Others
- US-18 - Consultant Dashboard My Appointments
- US-17 - Billing Execution Op Bill
- US-16 - Radiology Transactions Reporting Worklist
- US-15 - Reports Bb Report Home
- US-14 - Doctor Activities Doctor Note
- US-13 - Wards Dashboard View Request
- US-12 - Nurse Dashboard View Request
- US-11 - Daycare Dashboard View Request
- US-10 - Consultant Dashboard View Request
- US-9 - Radiology Transactions Front Office
- US-R - Radiology Transactions Technicians Worklist

User select one user story from the dropdown then immediately the selected user story details such as **Story Title, Description, Acceptance Criteria and Additional Info** populated in the existing fields in the UI

Jira Connection

CONNECT TO JIRA

API connection successful and please select one userstory from the dropdown

Select Jira User Story

US-9 - Radiology Transactions Front Office

Story Title *

Radiology Transactions Front Office

Description

As a user, I want to radiology transactions front office so that the related functionality works as expected.

Acceptance Criteria *

Given the system is operational, when the user performs the intended action, then the system should respond accurately and meet functional expectations.

Additional Info

Status: To Do | Project: UserStories | Created: 2026-06-21T12:17:27.447+0530

Generate

Now to test the existing logic, clicking on the Generate button and see the test cases are getting generated.

Generate

Generated Test Cases

30 test case(s) generated • Model: llama-3.3-70b-versatile • Input tokens: 433 • Output tokens: 2909 • Cost: \$0.002554 (est.)

Test Case ID	Title	Category	Expected Result
▶ TC-001	Successful Radiology Transaction	Positive	The system processes the transaction successfully and displays a confirmation message
▶ TC-002	Invalid Patient Details	Negative	The system displays an error message indicating invalid patient details
▶ TC-003	Missing Transaction Details	Negative	The system displays an error message indicating missing transaction details
▶ TC-004	Edge Case - Large Transaction Volume	Edge	The system processes all transactions successfully without any performance issues
▶ TC-005	Authorization - Invalid User Role	Authorization	The system denies access to the radiology transactions front office and displays an error message
▶ TC-006	Non-Functional - System Performance	Non-Functional	The system responds within the expected time frame and utilizes resources efficiently
▶ TC-007	Non-Functional - Data Security	Non-Functional	The system protects sensitive data and ensures confidentiality, integrity, and availability
▶ TC-008	Positive - Transaction Cancellation	Positive	The system cancels the transaction successfully and displays a confirmation message
▶ TC-009	Negative - Duplicate Transaction	Negative	The system displays an error message indicating a duplicate transaction

Sucesss!!
